Projects

TerraGuard – Terraform IaC Security Scanner | *TypeScript, Next.js, GitHub Actions, SARIF*

- Built a deterministic static-analysis scanner with **29 rules** that flags Terraform misconfigurations in IAM, S3, RDS, EC2, networking, KMS and secrets, mapped to **CIS AWS** and **NIST 800-53**.
- Shipped a CLI with text, JSON and **SARIF** output and severity fail thresholds, run in **GitHub Actions** on every pull request; scans 100 KB of HCL in ∼270 ms.
- Generated secure-code fixes per finding; validated by **230 tests** and benchmarked vs. Checkov and Trivy.

CloudSentinel – Multi-Cloud Threat Detection & Response | *TypeScript, Next.js, AWS SDK, Vitest*

- Normalized findings from **AWS GuardDuty**, **Azure Defender for Cloud** and **GCP Security Command Center** into one schema with explainable 0–100 risk scoring.
- Correlated events by source IP and identity into **cross-cloud incidents**, surfacing coordinated attacks.
- Built analyst-approved response actions (quarantine, revoke credentials) recorded in an authenticated audit log.
